# foreign agriculture circular

## sugar

FS 3-77  
August 1977

### WORLD SUGAR SUPPLY AND DISTRIBUTION 1954/55 - 1975/76

This circular is an update of Foreign Agricultural Service, USDA, Statistical Bulletin No. 562, October 1976. It adds the years 1974/75 and 1975/76 to that Bulletin.

The supply and distribution data is on a crop year basis by country, with the years shown being the ending years. The crop year is September-August; however, some countries are not on this basis. Although sugar crops are among the most universally produced agricultural commodities, there is a category of "other importers" that includes some 36 countries that produce virtually no sugar.

The area data contained in this circular represent the area harvested. In the case of sugarcane area, it was necessary to make a separation for the countries producing both centrifugal and noncentrifugal sugar so as to show only the former. There are three columns for utilization data that are not used. They may be used in the future if a breakdown is made for different kinds of utilization. The sugar statistics are on a raw value basis in thousands of metric tons, except for yield, which is in tons. Area-harvested data is in thousands of hectares.
